Hiring Committee

City of Toronto - Fleet Services Division

Fleet Services, Business Management (Fleet Business Intelligence and Reporting)

843 Eastern Avenue; other work locations as assigned, including the Union Station area

### Re: Data Specialist (Job ID: 64089) - Full-Time, Temporary (24 months)

Dear Members of the Hiring Committee,

I am writing to express my interest in the **Data Specialist** position (Job ID 64089) with **Fleet Services, Business Management**, reporting to the Manager, Fleet Business Intelligence and Reporting. The role's focus on building and sustaining advanced analytics capacity, high-performing data pipelines, and reliable ETL/ELT and reporting for large municipal datasets closely matches my experience turning complex operational and spatial data into decision-ready insight in a public-sector, Toronto context.

I hold a **PhD in Civil Engineering (Transportation)** and work as a **Data Scientist and Postdoctoral Fellow** at York University, specializing in data-driven methods for public transportation, fleet electrification, and urban systems. I use **Python, SQL, and GIS** extensively (including spatial data, mapping, and network analysis), and I apply **statistics, optimization, and predictive modelling** to large structured and sensor-oriented datasets such as real-time GTFS, GPS-relevant feed data, and electrification and charging scenarios. I have validated electric bus allocation and charging decision-support with **TTC operations**, built decision tools used for transit service reliability, and published peer-reviewed work on large-scale system analysis. That experience translates well to FSD's fleet assets, work management, and sustainability and infrastructure priorities. I hold a professional credential in **Databases and SQL for Data Science (IBM / Coursera)** and I document models, code, and assumptions to support governance and handoff. I have developed interactive dashboards and analytical outputs for technical and non-technical audiences and am ready to deepen my use of **Tableau, Power BI**, and corporate BI platforms in a dedicated Fleet Business Intelligence environment.

I have a demonstrated record of collaboration with the City's ecosystem: work linked to the **Headway Management / bunching pilot** and related analytics has been recognized through the **City of Toronto Open Data Challenge (1st place, 2026)** and professional awards, reflecting a commitment to **data quality, root-cause analysis, and actionable reporting**. I am motivated by FSD's leadership of Canada's largest municipal fleet, the Sustainable Fleet plan, and safety and compliance mandates, and I am prepared to work cross-functionally with corporate partners on data governance, performance of high-volume ETL/ELT, and clear communication to management and Council-facing materials when required.

I would welcome an interview to discuss how my background in **advanced analytics, geospatial and fleet-relevant modelling, and municipal-scale data pipelines** can support Fleet Services. Thank you for your consideration of my application for the **Non-Union, 35 hours per week**

**(Monday to Friday)** position posted until 7 May 2026.

Sincerely,

Vahed Barzegari
